

## WeatherStation® Multisensor – Ultrasonic Instruments for Use in Ice-Prone Areas

A Compact, Rugged Instrument  
for Informed Decision-Making

### 220WXH Multisensor

The patented 220WXH is Airmar's recommended model for weather-monitoring in ice-prone areas. Designed with an efficient, thermostatically controlled heating system, it operates effectively in extremely cold climates. The IPX6 housing is compact, rugged and durable with no moving parts, adding to its longevity and low cost of ownership.

The 220WXH has an internal 10 Hz GPS, and provides position, speed-over-ground, and course-over-ground data. The 220WXH calculates the Dynamic True wind speed and direction based upon the apparent wind speed, speed of the vessel, and vessel heading. A 3D compass with dynamic stabilization provided by the three-axis rate gyro enhances heading accuracy in heavy pitch and roll conditions.

# Understanding Dynamic True and Apparent Wind

Virtually all anemometers report wind speed and direction. Airmar's WeatherStation Instruments are unique because they calculate both dynamic true and apparent wind speed and direction. When the WeatherStation instrument is mounted on a moving (dynamic) platform, the apparent wind is the wind felt on your hand if you held it out while moving. Dynamic true wind is the wind relative to North but also corrected for the speed and direction of the vessel. WeatherStation WX instruments integrate a GPS and 3-Axis compass, which allows for the calculation of the dynamic true wind speed and direction based upon the apparent wind, speed of the vehicle, and vehicle heading. Dynamic True wind measurement can be critical for any application where the platform is moving.

Airmar's WX Series products are the only all-in-one unit to offer dynamic true and apparent wind speeds without additional sensors.
